The Evolution of Invoice Processing

The Historic Process

Teams processed invoices manually, with a staff of dedicated, onsite AP professionals handling all of the manual labor.

- Manual data entry
- Time-consuming coding
- High potential for human error
- Inconsistent processing times

The Outsourced Process

To save costs and remove burden from in-house employees, teams send invoice coding offshore using third-party services.

- Creates time delays
- Adds additional expenses
- Is not scalable
- Does not solve for human error
- Is still a manual process

The AI Process

Automation takes the manual data entry out of invoice processing, delivering better accuracy, faster processing times, and more insights into your data.

- Up to 80% faster processing times
- Streamlined workflow from invoice receipt to approval
- No human error
- Smarter machine learning
- Scalable infrastructure
- Built for growth
